### 3 Tests of Authentication

- **Infra-red Ink.**
- **I.R.P.S.<sup>(1)</sup>**
- **Holographic Metal Band.**

**MONETEC™** Market leader in the automatic authentication of bank notes.

# MONETEC™

EURO COUNTERFEIT BANKNOTE DETECTOR

The **Saturn** is the Multi-purpose Euro detector which can be used in fixed post as well as in portable post. With a very high effectiveness, a fast and automatic detection of the banknotes, the **Saturn** adapts to all the conditions of use.

With three identification tests (InfraRed Ink, I.R.P.S. <sup>(1)</sup>, Holographic Metal Band), it effectively distinguishes the forgery of truth.

Using a technology based on a microprocessor RISC, this detector allows to download updates of its software. This essential characteristic provides **Saturn** with capacities of **evolution and performance** through the possibility of downloading new software versions to keep up with the progress of forgers.

Of reduced size, with a power supply by battery or electrical network, provided with a mounting plate, the **Saturne** is integrated easily in any place. All these elements make that **Saturn** is today the forged banknote detector of reference.
